

# Waste legislation training courses

**Is your company at risk of enforcement action?**

**Do you struggle to keep up with all the changes to waste related legislation?**

**Are you looking for a course that will deal with the practicalities of how the various Regulations may affect you?**

Waste is affected by a wide – and increasing – range of legislation that affects not only those that produce or manage waste, but also those that place products onto the market that will become waste.

The penalties for failing to comply with waste Regulations can include large fines and even imprisonment. But often, it is the damage to the reputation of a company that is most significant, impacting on both existing customers and the ability to tender for new contracts.

360 Environmental staff have extensive waste management experience and expertise with many years practical experience in operational and development roles. We therefore understand customers needs and can identify with the key requirements that most waste managers need to satisfy.

360 courses are designed to be:

**Informative** – we ensure that delegates go away with a good understanding of the particular course topics .

**Comprehensive** –we cover all the key issues that those managing the topic areas need to be aware of.

**Interactive** – we expect delegate participation on the basis that this is teaching rather than preaching. Delegate examples are drawn out and used for illustration.

**Challenging** – we set a test paper at the end to help delegates identify any areas of misunderstanding or confusion.

Typically, a course will take most of a day with breaks for mid morning and afternoon coffee and lunch. Plenty of time will be available for questions with an opportunity for one-to-one discussion at the end. Courses have a maximum of 12 delegates.

360 currently run 3 courses:

**Waste legislation whistle stop** –

briefly covering all areas of waste legislation including:

Duty of Care, Transfer notes, waste carriers, hazardous waste, landfill regulations, environmental permitting and exemptions, animal by-products and producer responsibility.

**Hazardous Waste** – covering the issues from a hazardous waste producer point of view – storage, documentation, collection, consignment notes, consignee returns etc.

**Producer responsibility** – covering the Packaging Regulations, WEEE and Batteries with a special emphasis on data collection, collation and submission.
